

Robot Development

Sanki CR-712

Lately RESER has been working on the development of the repair and refurbishment of the Sanki Clean Robot CR-712 used in the Hitachi etchers.

As of today we now offer a Level 1 refurbishment (OEM refurbishment) and the RESER exclusive Level 2 refurbishment for the Sanki CR-712 robots.

The Level 2 refurbishment is beyond the industry standard. Complete disassembly and rebuild of the robot. All the wear items like bearings, timing belts and vacuum lines are preventively replaced.

After the L1 and L2 refurbishment, the vacuum circuit, repeatability and wafer shuffle of the robot are extensively tested.

You can expect the same quality standards that you have grown accustomed to from RESER. The Sanki CR-712 robots are a great addition to the already comprehensive line of robots and robot related refurbishments RESER currently offers.
